### USG ABDOMEN

#### **ABDOMENAL ULTRASOUND REVEALED:**

- Liver is of average size, smooth outline and homogenous echo-pattern. No focal lesions were detected.
- No intra or extra hepatic biliary radicles dilatation.
- Gall bladder is acalculous showing normal capacity and wall thickness.
- Normal caliber of the portal vein and C.B.D.
- Spleen is of normal size and homogenous echogenicity.
- Normal sonographic appearance of the pancreatic head.
- Para-aortic regions are masked by gases.
- Right Kidney is normal in site, size, shape, parenchymal thickness and echogenicity with no sizable kidney stones and no back pressure changes. Few tiny (Less than 3 mm) hyperechoic foci are noted scattered within the renal calyces. Small right renal simple cortical cyst is seen at its upper zone measuring about 22x17 mm.
- Left Kidney is normal in site, size, shape, parenchymal thickness and echogenicity with no sizable kidney stones and no back pressure changes. Few tiny (Less than 3 mm) hyperechoic foci are noted scattered within the renal calyces.
- Both ureters are masked by gases yet their proximal parts appear not dilated.
- No ascites.
- Right iliac fossa shows no sizable masses or significant fluid collection at the time of scanning. No ultrasound evidence of acute appendicitis could be detected yet it could not be totally excluded by ultrasound for clinical and lab correlation.

#### **CONCLUSION:**

- Bilateral non obstructing renal microlithiasis.
- Small right renal simple cortical cyst.
- Gaseous distension evident colonic.

### USG KUB

#### URINARY TRACT ULTRASOUND REVEALED:

- Right Kidney is normal in site, size, shape, parenchymal thickness and echogenicity with no sizable kidney stones and no back pressure changes. Few tiny (Less than 3 mm) hyperechoic foci are noted scattered within the renal calyces. Small right renal simple cortical cyst is seen at its upper zone measuring about 20x17 mm.
- Left Kidney is normal in site, size, shape, parenchymal thickness and echogenicity with no sizable kidney stones and no back pressure changes. Few tiny (Less than 3 mm) hyperechoic foci are noted scattered within the renal calyces.
- Both ureters are masked by gases yet their proximal parts appear not dilated.
- Urinary bladder has normal wall thickness with no stones, masses or diverticula.
- Prostate is normal in size and shape showing no calcifications and no focal lesions.

#### CONCLUSION:

- Bilateral non obstructing renal microlithiasis.
- Small right renal simple cortical cyst.
- Gaseous distension evident colonic.
